## Abstract of the Disclosure

A label laminate and a method for manufacturing a label laminate. The laminate includes a first label material layer and a second label material. The method includes forming a pattern in which adhesive areas and non-adhesive areas alternate on the face side of the first label material layer and on the face side of the second label material layer. The adhesive areas on the first label material layer are aligned with the non-adhesive areas on the second label material layer and the non-adhesive areas on the first label material layer are aligned with the adhesive areas on the second label material layer. The face sides of two label material layers are attached to each other. The adhesive areas are formed by a screening method. The non-adhesive areas have a surface energy, which is at least 25 dynes.
